

SUKINO HEALTHCARE — ENDOCRINOLOGY OPD PRESCRIPTION

Patient: Priya Sharma, 41 F | UHID: SK-55418

Date: 11 March 2026 | Consultant: Dr. R. Bhat, MD (Endocrinology)

Diagnosis: Primary hypothyroidism. TSH 11.6 mIU/L, Free T4 low-normal.

Rx

- Tab. Levothyroxine 75 mcg — 1 tablet ORALLY, ONCE DAILY, empty stomach, 30-60 minutes before breakfast. Duration: 8 weeks.
- Tab. Vitamin D3 60,000 IU — ONCE WEEKLY on Sunday, 8 weeks.

Nursing notes:

- Do not give with calcium, iron, or antacids — separate by at least 4 hours.
- Same time every morning; do not double a missed dose.
- Report palpitations, tremor, or weight loss (over-replacement).

Repeat TSH after 8 weeks before dose revision.
