

SUKINO HEALTHCARE — DISCHARGE SUMMARY

Patient: Abdul Rahman, 63 M | UHID: SK-46318

Admitted: 5 March 2026 | Discharged: 13 March 2026

Unit: Nephrology | Consultant: Dr. T. Balakrishnan, DM (Nephro)

Diagnosis: Chronic kidney disease stage 5 on maintenance haemodialysis, with fluid overload and anaemia. Serum creatinine 8.2 mg/dL, Hb 8.1 g/dL.

Hospital course:

Three sessions of haemodialysis via right internal jugular catheter with ultrafiltration of 2.5 L per session. Breathlessness resolved. Two units packed red cells transfused; post-transfusion Hb 9.8 g/dL. AV fistula created on the left forearm on 10 March, thrill present at discharge.

Discharge medications:

- Tab. Torsemide 20 mg — once daily in the morning.
- Tab. Sevelamer 400 mg — with each meal.
- Inj. Erythropoietin 4000 IU — subcutaneous, twice weekly.
- Tab. Calcitriol 0.25 mcg — once daily.

Care plan at home:

- Haemodialysis twice weekly (Tuesday, Friday) at the Sukino dialysis unit.
- Fluid restriction 1 L/day; daily weight chart, report gain > 1.5 kg/day.
- Low potassium diet: avoid banana, coconut water, tomato, citrus.
- Protect the fistula arm: no BP cuff, no blood sampling, no tight clothing.
- Nephrology review on 20 March 2026 with renal function and electrolytes.
